

In Depth Training Courses

A component of Summit's recommended Revit implementation strategy

As part of our implementation strategy for Revit, users are encouraged to take more in-depth training as required. In order to offer the most flexibility in this regard, our staff has created a series of modules most in demand by users who have implemented Revit.

A typical implementation will include management training, essentials training, followed by project start-up and mentoring. After this initial start-up, users will be ready for the in-depth course offerings below.

These courses are modules we have developed thus far. They are roughly divided into three general categories - General, Design and Documentation although there is a significant overlap between all of the courses.

Most of the modules are ½ day in duration. In this way we can put together a 1, 2 or 3 day program with the modules that are most appropriate to your organization.

1. General

- 1.1 Family Editor Basics
- 1.2 Project Organization
- 1.3 Project Documentation
- 1.4 Tips and Tricks
- 1.5 Contract Administration
- 1.6 Data Export/Import
- 1.7 Worksets
- 1.8 BIM and Sustainable Design
- 1.9 BIM for Construction Management

2. Design

- 2.1 Interiors
- 2.2 Curtain Wall
- 2.3 Site tools
- 2.4 Presentation and Visualization
- 2.5 Phasing and Design Options
- 2.6 Preliminary Design

3. Documentation

- 3.1 Detailing
- 3.2 Scheduling
- 3.3 Advanced Assemblies
- 3.4 Collaboration
- 3.5 Advanced Family Editor
